Medical Evacuation

Secure Medical Transport, Anytime, Anywhere

How does Medical Evacuation work?

Med-Evac plans can be a great complement to your Health or Travel Insurance policies, or even if you do not carry any type of insurance.

Both Travel and Health Insurance policies offer Air Ambulance, also known as Medical Evacuation. However, most insurance companies offer this benefit for very specific circumstances. Also, most of them will only fly you to the nearest medical facility in the country you live.

The difference with Medical Evacuation plans is that their benefits are broader, and it doesn't have to be a life-threatening situation for you to use them.

With plans like this, you can pick the hospital you want to be taken to in Mexico, the US, or Canada. And, as soon as you have a doctor's approval to fly, you can be flown to the hospital of your choice.

What are the **benefits** of Medical Evacuation?

- Hospital-to-hospital **emergency Air-Evac**,
- Transportation to the city and **hospital of your choice** in your home country (USA & Canada only),

- Plans available for **people vacationing** (living part-time or full-time in Mexico),
- **Return transportation** after recovery,
- **Your vehicle, RV, and/or sea vessel** can be taken back north for you,
- **No limit** of Med-Evac services,
- **Transportation of your pet.**

Frequently Asked Questions:

1. Would the company pay hospitalization costs too?

No. Medical Evacuation companies usually offer coverage only for the service of flying you back to your home country, but all hospital and doctors' expenses before and after that have to be covered by the insured.

2. Where would I be flown to in the event of an emergency?

You are flown back to the hospital or medical facility in the USA or Canada that you selected when you contracted the policy. This benefit differs from the Medical Evacuation coverage on a private Health Insurance policy. The Health Insurance Medical Evacuation coverage will only evacuate you if the facility you are in cannot effectively handle your situation. Furthermore, if transportation to another facility is necessary, you will be taken to the closest facility capable of treating you.
